Sam's IGA Local Grocer Parkville

CASE STUDY

A full supermarket fit-out, built inside a live underground rail project

Client	Sam's IGA
Location	Parkville, VIC
Project Type	Supermarket & Liquor
Scope	Full fixture supply, custom counter, delivery & installation coordination

The store sits below ground, inside an underground train station built as part of Melbourne's Metro Tunnel project. Every delivery and every fixture depended on restricted station access, and an internal concrete column ran straight through the planned counter area.

The Fit-Out

- S-Mart Supermarket & Liquor Shelving
- Custom, locally manufactured checkout counter engineered to wrap around the internal column
- Produce Displays
- Bread Display Drawers and Shelving
- Coolroom Shelving
- Coordinated delivery and installation planned around restricted access

The Result

ADP managed fixture supply, delivery and installation as a single, integrated process, giving Sam's IGA one point of responsibility from supply through to completion. The custom counter turned a structural obstacle into a focal point at the centre of the store.

Why It Stands Out

One of the most access-constrained retail sites ADP has delivered, completed without the store losing any of its polish or functionality.
